

# D-5336

M.Sc. (III<sup>rd</sup> Semester) Examination, 2020

## MATHEMATICS

(Numerical Analysis - I)

Time Allowed : Three Hours

Maximum Marks : 70

### SECTION - A

**Note :** Attempt all ten questions. Each question carries one mark. **10×1=10**

**Q. 1.** Objective Type :

Fill in the blanks :

(i) The finite difference form of  $\frac{\partial^2 u}{\partial x^2} = \underline{\hspace{2cm}}$   
and  $\frac{\partial^2 u}{\partial y^2} = \underline{\hspace{2cm}}$ .

(ii) Gauss's forward interpolation formula used when  $u$  lies between  $\underline{\hspace{2cm}}$  and  $\underline{\hspace{2cm}}$ .

(iii) The divided differences are  $\underline{\hspace{2cm}}$  in all their arguments.

**(2)**

- (iv) Stirling's formula is the  $\underline{\hspace{2cm}}$  of the two Gauss's formula.
- (v) The error  $E$  in the trapezoidal rule is of the order  $\underline{\hspace{2cm}}$ .

Choose the correct answer :

(vi)  $\Delta^r x^{(n)} = 0$  if :

- (a)  $r < n$
- (b)  $r = n$
- (c)  $r > n$
- (d) None of these

(vii) Newton's forward interpolation formula used mainly for interpolating the values of  $y$  :

- (a) Near the beginning of a set of tabular value
- (b) Near the ending of a set of tabular value
- (c) Both (a) & (b)
- (d) None of these

**(3)**

(viii) The divided difference operator  $\Delta$  is :

- (a) Constant
- (b) Linear
- (c) Quadratic
- (d) None of these

(ix) Gauss backward interpolation formula useful

when  $u$  lies between :

- (a) 1 and 0
- (b) -1 and 0
- (c) -1 and 1
- (d) None of these

(x) The sum of Newton's Cotes number is :

- (a) 1
- (b) -1
- (c) 0
- (d) None of these

**(4)**

**SECTION - B**

**Note :** Attempt any five questions. Each question carries 2 marks. **5×2=10**

**Q. 2.** Very short answer type (25-30 words) :

- (1) Define operator  $E$  & write its properties.
- (2) Find the error in Newton's interpolating polynomial.
- (3) If  $u = \frac{x - x_0}{n}$ , then specify the range for  $u$  to obtain better result using Bessel's formula.
- (4) Define divided differences and write two properties.
- (5) State Stirling's interpolation formula upto the third order difference term.
- (6) What are the errors in Trapezoidal and Simpson's rule of numerical integration.
- (7) Can you use Lagrange's interpolation formula when  $h = 1$ .

(5)

SECTION - C

Note : Attempt any five questions. Each question carries 4 marks. 5×4=20

Q. 3. Short answer type (250 words) :

(1) Prove that :

$$\left(\frac{\Delta^2}{E}\right)e^x \cdot \frac{Ee^x}{\Delta^2 e^x} = e^x$$

(2) Represent the function  $f(x) = x^4 + 3x^3 - 5x^2 + 6x - 7$  in factorial polynomial and their successive forward differences, taking  $h = 1$ .

(3) Discuss various types of different interpolation methods.

(4) Find  $f(x)$  as a polynomial in  $x$  from the given

data :

x	:	3	7	9	10
f(x)	:	168	120	72	63

(6)

(5) Find  $f(x)$  by Hermite's interpolation from the

table :

x	:	-1	0	1
f	:	1	1	3
f'	:	-5	1	7

(6) Using Bessel's formula find  $3\sqrt{46.24}$  given :

x	:	41	45	49	53
$x^{1/3}$	:	3.4482	3.5569	3.6593	3.7563

(7) Find  $y'(0)$  &  $y''(0)$  from the following table :

x	:	0	1	2	3	4	5
y	:	4	8	15	7	6	2

SECTION - D

Note : Attempt any three questions. Each question carries 10 marks. 10×3=30

Q. 4. Essay Type :

(1) From the following data, find  $y$  at  $x = 43$  and  $x = 84$  by using Gregory-Newton forward and backward interpolation formula :

x	:	40	50	60	70	80	90
y	:	184	204	226	250	276	304

**(7)**

- (2) Apply Gauss's forward interpolation formula to find  $y(25)$  for the following data :

x : 20    24    28    32  
y : 2854 3162 3544 3992

- (3) Use Lagrange's interpolation formula to find the value of  $f(x)$  corresponding to  $x = 27$  from the following data ;

x : 14    17    31    35  
f(x) : 68.5 64.0 44.0 39.1

- (4) Evaluate  $\int_0^6 \frac{dx}{1+x^2}$  by using Trapezoidal rule taking  $h = 1$ .
